Update from OCs OTC Working Group

Dear Working Group Member,

Below is a link to an article in the American Prospect that highlights the OCs OTC working group:

**Inconvenient Contraception**

For millions of women, getting birth control is a laborious process. Would making the pill an over-the-counter drug be the best policy fix?

I'm also attaching an article that was published last month with the results of a survey of pharmacists regarding their interest in directly providing hormonal contraception. The study found that 85% of respondents were interested in direct pharmacy provision of hormonal contraception.

Please let me know if you have any questions or comments about these pieces.

Thanks,
Dan
